### Group Technology and Operations: Technology

#### Analyst Training Program

Deutsche Bank ([www.db.com](http://www.db.com)) is one of the largest, most technologically driven investment banks in the world.

The popular image of investment banking is one of slick, fast-moving dealmakers. But deals can only work if the right processes and people are in place to back up the deal making.

Technology is responsible for the development, implementation and maintenance of cutting-edge software applications required to process deals and information ensuring the bank can open for business each day.

Our people work closely with the business to develop solutions that enable them and their clients to stay ahead of their game - Technology is no longer a place where programmers work in isolation but one where communication and innovation allow us to provide an unbeatable service to our clients.

#### **Full-time Graduate Analyst Program:**

Deutsche Bank is committed to offering a wealth of development opportunities to our graduates through our GTO Graduate Program, which has been designed to provide you with a challenging, deep and broad learning experience.

The GTO Graduate Program will provide you with a wealth of opportunities including:

- Global Induction training with an intensive 6 week program in London
- A minimum of 2 job rotations, each lasting 4-8 months
- Mid-program training with graduates from your region
- A 2 day career management program at the end of the training

Our program is designed to equip you with the exposure, knowledge and skills you require for a successful career with Deutsche Bank.

We have a number of vacancies in our **Milan office**. For more information on a career at Deutsche Bank and how to apply see: [www.db.com/careers](http://www.db.com/careers)

**Expect the better career.**
