

English for Scientific Communication: Courses 2022/2023

The course is held predominantly online.

However there are two lessons in the classroom for students to practise their presentations in a simulation of a live conference scenario. These two lessons cannot be accessed remotely.

Programme (writing research papers + presenting research at international conferences)

The course includes a mix of writing and presenting skills - these two skills are NOT taught in separate courses but integrated into a single course in order to create more dynamic lessons.

In the parts dedicated to **writing**, students will learn how to:

- increase readability, reduce the number of mistakes made in English, and avoid redundancy
- formulate a sentence respecting the rules of English syntax
- write a title and an abstract that will attract attention and thus be read
- decide what to include in the various parts of the article (abstract, introduction, discussion, etc.)
- choose the correct tenses and the correct style (active or passive, personal or impersonal)
- highlight gap filled, key findings, and overall contribution
- avoid ambiguities due to errors in the use of pronouns, tenses, and keywords
- avoid plagiarism
- deal with editors and referees (emails)
- learn some basics about writing CVs

In the seminars dedicated to **presentations**, students will learn how to:

- design, practise and deliver a well-structured and interesting presentation
- write a script and avoid mistakes in English by using simple and short sentences
- improve pronunciation and intonation in English
- gain confidence and overcome nervousness and embarrassment
- attract and retain the attention of listeners
- ensure a memorable take-home message through effective final slides
- deal with the Q&A session

The course teaches not only how to write and present a scientific paper, but also many communication / life skills. These skills are applicable in any language in any situation.
