WOMEN IN DYNAMICAL SYSTEMS & ERGODIC THEORY

The purpose of the event is to promote women and gender minorities working on Dynamical Systems and Ergodic Theory: the speakers will consist of women and non-binary people whereas all genders are welcome to attend the conference. The topic will cover different aspects of dynamical systems and ergodic theory such as e.g. homogeneous dynamics, statistical properties, numeration systems, Diophantine approximation, Teichmüller theory and give connections to other mathematical areas, e.g. to geometry, number theory and logic.

The target audience would particularly be young researchers who want to explore different research directions within the broad field of dynamical systems and ergodic theory but also more senior ones, wanting to broaden their research by getting connections to research areas which so far don't lie in their core research field. Indeed, we will also have contributed talks and posters by younger researchers.

CONFIRMED SPEAKERS:

SHABNAM AKHTARI
Pennsylvania State University

VALÉRIE BERTHÉ
CNRS, Université Paris Cité

NGUYEN-THI DANG
Université Paris-Saclay

TATJANA EISNER
University of Leipzig

SAMANTHA FAIRCHILD
Max Planck Institute

CECILIA GONZALEZ-TOKMAN
The University of Queensland

NATALIA JURGA
University of St Andrews

CHARLENE KALLE
Leiden University

SEONHEE LIM
Seoul National University

MICHELA PROCESI
Università di Roma Tre

ALEXANDRA SKRIPCHENKO
HSE University

DALIA TERHESIU
Leiden University

ZHENQI WANG
Michigan State University
