MODERN TRENDS IN OPERATOR THEORY AND GEOMETRIC ANALYSIS

01 – 04 December 2026

AULA DINI

Via del Castelletto, 11
Scuola Normale Superiore
PISA

The conference aims to foster interaction and the exchange of ideas among experts from different areas of Mathematics who, while adopting distinct languages and techniques, address common problems lying at the intersection of Analysis and Geometry. The goal is to create a stimulating environment where complementary perspectives converge, encouraging the emergence of new scientific collaborations and the exploration of frontier research topics. The invited speakers represent some of the leading European and international experts in their respective fields. They cover a broad range of topics, including:

- Analysis of Partial Differential Equations
- Differential Geometry
- Spectral Analysis
- Operator Theory

The selection was made with the aim of representing the diversity of approaches and methodologies that characterize current research in these areas, promoting interdisciplinary dialogue between communities that rarely meet in a single scientific setting.
